      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being print and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                             The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides compositions comprising ospC proteins and chimmeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 43; Page 150-151; 160pp; English.

                                                                                                                                                                                                                                                                                                                                              The present invention provides compositions comprising ospC proteins chimeric ospC proteins from members of the Borrelia genus. These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leaves.
                                                                                                                                                                                                                                                                                                                                                                                                        ç

These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and less vaccines.

                                                      The present invention provides compositions comprising ospc protein chimeric ospc proteins from members of the Borrelia genus. These members of the Borrelia genus. These members of the Borrelia genus. These of Borrelia burgdorferi, B. afzelii or B. garinii. These can be used vaccines against Borrelia infection, which is spread by ticks and

These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.

"Complete nucleotide sequence and deduced polypeptide sequence nonmuscle myosin heavy chain gene from Acanthamoeba: evidence o hinge in the rodilke tail.";

J. Cell Biol. 105:913-925(1987).

-I- FUNCTION: MYOSIN IS A PROTEIN THAT BINDS TO F-ACTIN & HAS A ACTIVATTY THAT IS ACTIVATED BY F-ACTIN.

-I- SUBUNIT: MYOSIN II HEAVY CHAIN IS TWO-HEADED. IT SELF-ASSEM INTO FILAMENTS. HEXAMER OF 2 HEAVY CHAIN SUBUNITS (MHC), 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LIPID

THIS REGION IS INTERRUPTED BY A HINGE AND JOINED BY A NON-HELICAL TAILPIECE WHERE THE REGULATORY PHOSPHORYLATION SITES RESIDE.

MISCELLANDOUS: THE HINGE REGION MAY PLAY A KEY ROLE IN MEDIATING THE EFFECT OF HEAVY CHAIN PHOSPHORYLATION ON ENZYMATIC ACTIVITY. SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.

SIMILARITY: CONTAINS 2 IQ DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LIGHT CHAIN SUBUNITS (MLC) AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).
